Gross Description: Histopathologists provide a diagnostic service for cancer; they handle the cells and tissues removed from suspicious 'lumps and bumps', identify the nature of the abnormality and, if malignant, provide information to the clinician about the type of cancer, its grade and, for some cancers, its responsiveness to certain treatments.

Microscopic Examination: Histopathologists provide a diagnostic service for cancer; they handle the cells and tissues removed from suspicious 'lumps and bumps', identify the nature of the abnormality and, if malignant, provide information to the clinician about the type of cancer, its grade and, for some cancers, its responsiveness to certain treatments.

Diagnosis:

Histopathologists provide a diagnostic service for cancer; they handle the cells and tissues removed from suspicious 'lumps and bumps', identify the nature of the abnormality and, if malignant, provide information to the clinician about the type of cancer, its grade and, for some cancers, its responsiveness to certain treatments.
